ORACLE®

Agenda

- JavaScript/HTML5 Rich Client Landscape
- Java EE 7
- Java EE + JavaScript

JavaScript/HTML5 Rich Clients Rising?

- The thin client vs. rich client debate is pretty old...
- Server-side web frameworks have ruled for a while (JSF, Struts, Spring MVC)
- AJAX was a mild shift to the client (PrimeFaces, GWT, Vaadin)
- Rich clients powered by JavaScript/HTML5 appear to be making a comeback...
 - Improving JavaScript engines (V8, *Monkey, Nashorn)
 - Better tools (jQuery, MV* frameworks, Chrome, FireFox, Avatar)
 - Standards advancement (CSS3, HTML5, WebSocket, HTML Components...)

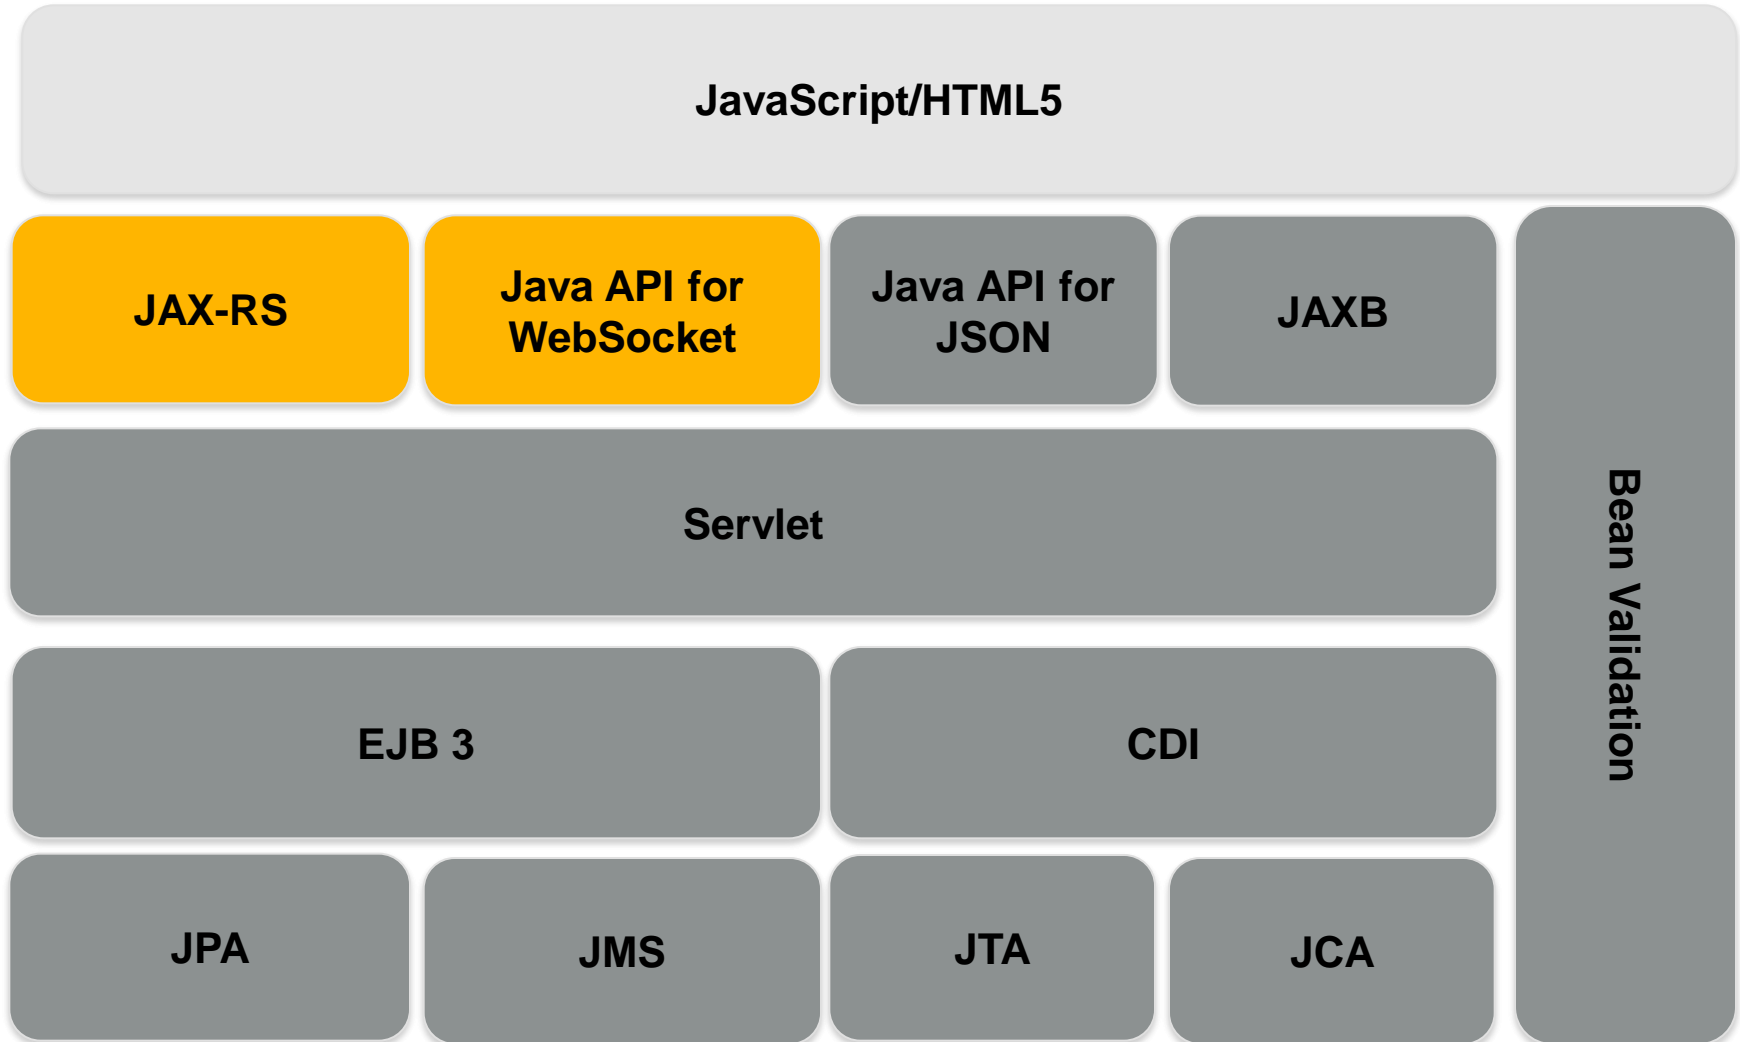

Perhaps not a Slam Dunk?

- Richer clients clearly better at some things
 - Highly dynamic, interactive interfaces
 - Complex, feature-rich UIs
 - “Single page applications” (“Applets” 😊)
- But perhaps not a panacea
 - Heavily form/workflow driven applications
 - Server-side rendering still a better bet for performance/reliability?
 - JavaScript/HTML development is not without it’s pains...
 - Server-side frameworks are a strong incumbent
- Co-existence in the short and long term?
 - Islands of rich client functionality within server-centric UIs?
 - Different strokes for different folks?

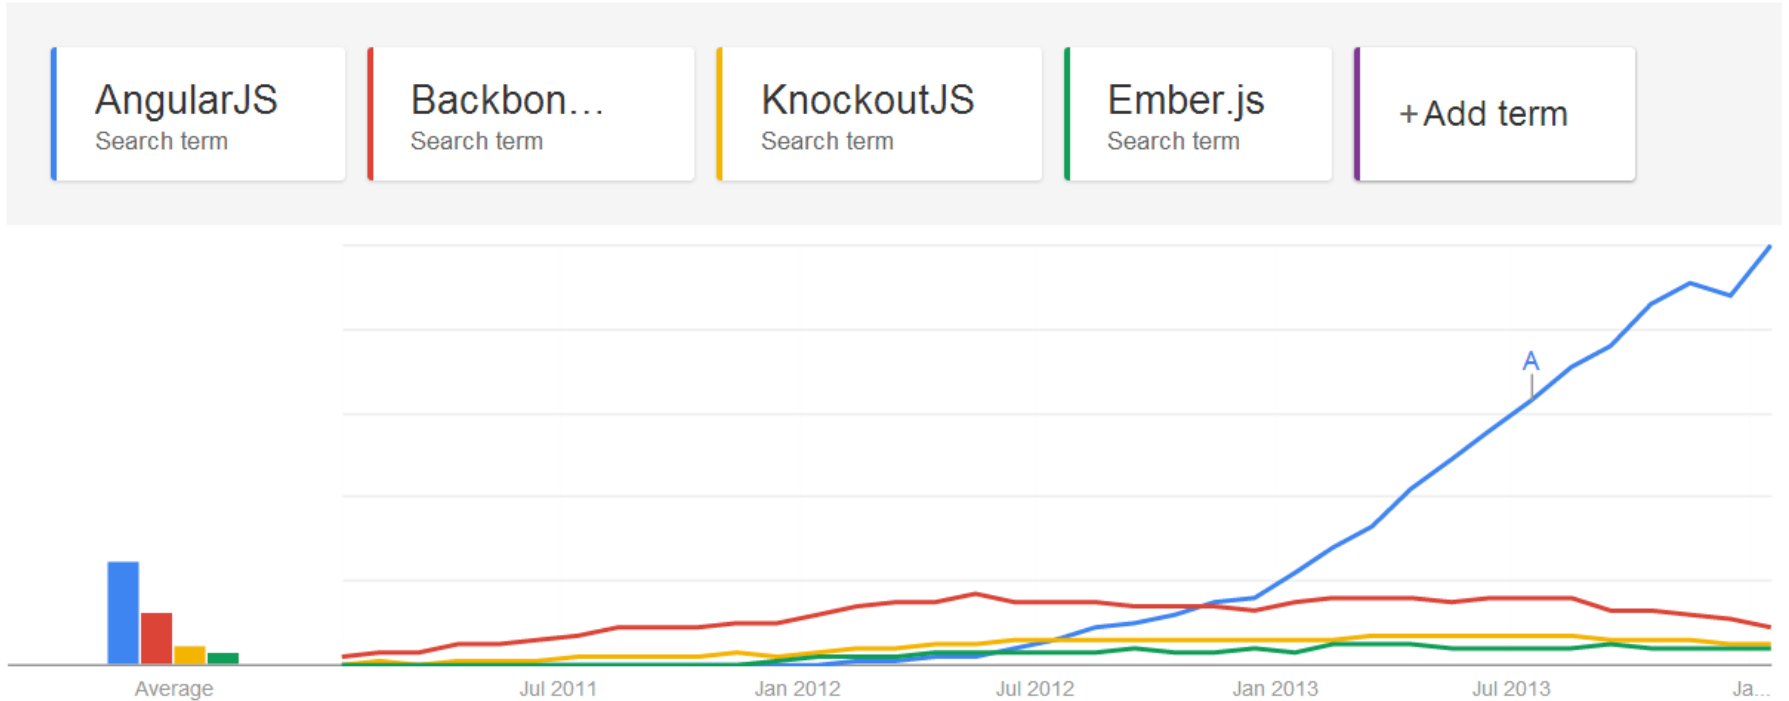

My Big Fat Rich-Client Architecture

- Very similar to client/server architecture of lore
 - Client responsible for UI rendering, basic input validation, logic and state
 - Server responsible for business logic, domain model, persistence
 - Web/HTTP is glue that connects client and server
- Typical communication protocols
 - REST for majority of cases
 - WebSocket when full-duplex communication is needed
 - JavaScript tools support REST well, but not WebSocket (yet)
- The typical (ideal?) data interchange format is JSON
- Java EE is a great server-side platform for this architecture...

Java EE + JavaScript

JavaScript Movers and Shakers

Java EE + JavaScript Demo

<https://github.com/m-reza-rahman/javaee-javascript>

Summary

- JavaScript/HTML5 clients gaining traction as opposed to server-side web frameworks
- Communication between the client and server happens via JSON over REST or WebSocket
- Java EE well positioned as a JavaScript rich client backend, especially with JAX-RS, the Java API for WebSocket and JSON-P
- You can use the demo code as a starting point to exploring the emerging space
- Most importantly, have fun!

Try it Out!
